

Dallas, Texas

July 22-24, 2026

Certified LeSS Practitioner Workshop

Principles to Practices - 3 days

Overview

Large-Scale Scrum (LeSS) is a simple framework for product development with multiple teams.

When working at scale the first order factors affecting adaptability are structural; not mindset, values, practices or methods. Changing culture requires changing structure with clear and explicit optimization goals in mind.

This Certified LeSS Practitioner workshop takes a system modeling approach to help participants better understand the interactions of various organizational aspects and their impact on adaptability. The insights gained from the system modeling activities are completely agnostic of any particular framework.

The system modeling insights by themselves can be difficult to fully conceptually internalize without grounding them in at least one concrete approach to executing on them. LeSS is explicitly designed to achieve highest-level adaptiveness in the service of learning and delivering highest-level value. Alternating between abstract system modeling and a study of the concrete implementation guidance of LeSS helps to stimulate deeper insights and better retention than would otherwise be possible.

The course is being hosted at The Statler Dallas in downtown Dallas.
